Critical Book Review of "Humanity working" by David Erdal

Employee ownership and implications for the future of

Human Resource Management *GRIN Verlag*

Literature Review from the year 2013 in the subject Business economics - Personnel and Organisation, grade: 20/20 Distinction, University of St Andrews, course: Human Resource Management, language: English, abstract: «The more equal and involved community gave people longer, happier lives» (Erdal, 2011: 242). 'Beyond the corporation: Humanity working' is a factual and policy text of our modern economic system, in which David Erdal proposes to extend democracy into organisations, contributing to a better distribution of wealth. As a consequence, this view raises substantial economic, political and social debates. It is essential to indicate that the book was published not long after the financial crisis of 2008, which provides the author with an ideal context for supporting organic growth rather than seeking investment through capital markets. David Erdal has progressively built his credentials in the area of humanity working and Human egalitarianism. Starting from leveraging an employee buyout of his family business and being awarded the Scottish Business Achievement Award in 1989, he has then undertaken considerable procedures in creating an Employee Stock Ownership Plan (ESOP). Principally, David Erdal challenges the traditional economists' approaches to organisational ownership structures, aiming at denouncing the immorality of current practices. Contrastingly, he promotes, in an easy and strong language, the benefits of employee ownership structures to society as a whole and the reason why this practice should be developed, which forms the purpose of this book. To support the feasibility of his thesis, Erdal draws upon personal experiences, through his family business, current business examples, such as

John Lewis, but also through substantial academic references. Throughout this review, we will firstly explore the key questions that Erdal raises and their implications into contemporary and policy debates. Secondly, we will perform an integrative analysis of the book structure and assumptions made, and thirdly we will provide a critical assessment of the author's conclusions.

Educational Curricula

Development and Evaluation *Nova Publishers*

In formal education, a curriculum (plural curricula) is the set of courses, and their content, offered at a school or university. As an idea, curriculum stems from the Latin word for race course, referring to the course of deeds and experiences through which children grow and mature in becoming adults. Crucial to the curriculum is the definition of the course objectives that usually are expressed as learning outcomes and normally include the

program's assessment strategy. These outcomes and assessments are grouped as units (or modules), and, therefore, the curriculum comprises a collection of such units, each, in turn, comprising a specialised, specific part of the curriculum. So, a typical curriculum includes communications, numeracy, information technology, and social skills units, with specific, specialised teaching of each. This book presents research on educational curricula from around the world.

Islam in China & The Plight of the Uighurs *Astronist Institution*

Full title: Critical analysis of the presence of Islam in China and the current plight of the Uighur Muslims in Xinjiang The central postulation made in this essay is that the current plight of the Uighur Muslims in the Xinjiang province of China is two-pronged in its cause. The first involves a deeply-rooted historical rejection, or at least suspicion, of any religion that is not Chinese in origin and secondly involves a concerted effort on behalf of the Chinese Communist Party to gain greater control over a people group whom it sees as representing a threat to its authority and dominance in the province of Xinjiang. To justify the validity of this statement, this essay will be divided into three distinct parts; the first two parts will explore the historical background and present day context of Islam in China with the aim of clarifying the Chinese worldview on foreign religions and people groups. These will act as important contributions to culminate into the third part which will focus on the current occurrence of sinofication/sinicisation in the Xinjiang province to the detriment of the human rights, religious and cultural liberties, and the very existence of the Uighur Muslim ethnic group. The essay will provide a historical context by explaining the timeline of the presence of Islam across different parts of China where it experienced the most activity and adherence. This particularly includes the southwestern ports where it was brought into the country by Arab traders as well as in the westernmost reaches as

a result of being part of the outer edges of different Islamic empires that held territory across Central Asia.

Main Types of Political Risks Experienced by Mnes *GRIN*

Verlag

Essay from the year 2011 in the subject Business economics - Marketing, Corporate Communication, CRM, Market Research, Social Media, grade: 1,3, University of St Andrews (School of Management), language: English, abstract: Identify the main types of political risk encountered by multinational corporations and discuss how these risks can be minimized. Introduction The controversy between the Kazak government and the Italian oil company ENI about the exploitation of Kashagans oil fields is only one out of many cases, in which political violence acts or governmental decisions threatened foreign investments of a multinational enterprise (MNE). In April 2006, the Dacion and Jusepin oil fields, operated by ENI and the French company Total, were taken over by the Venezuelan government, because they rejected to change their business operations into joint ventures with the state-owned oil company PDVSA (Ferrari and Rolfini 2008). Stated by Kesternich and Schnitzer (2009) some recent empirical studies identified that for MNEs political risk is one of the most important factors when considering a foreign investment. Foreign investments nowadays seem to be even more risky in terms of pollution that result in natural catastrophes such as caused by BP (Heller 2011), cultural conflicts or political disturbances for which Lybia (Yang 2011) represents a recent example and an increasing social disparity (Bloch, Koeplinger and Wolfrum 2007) [...]"

Delivery Services. An Industry Report about the Corporate Finance Practices

M&A, Dividend Policies and Ownership/Capital Structure

GRIN Verlag

Seminar paper from the year 2015 in the subject Business economics - Business Management, Corporate Governance, grade: 17, University of St Andrews (School of Management), language: English, abstract: The delivery service industry includes mail and package deliveries for commercial and consumer use by road, air and ship. This report will concentrate on the package and express delivery industry, since the conventional postal and letter business is declining and mostly operated by state-owned companies, which are hard to compare with private-owned companies. Four large companies, FedEx, UPS, DHL and TNT, dominate the market in Europe and the United States. TNT is the smallest among those four. However, TNT is the market leader in two major European markets, UK and Italy. The market in the United States is highly dominated by FedEx and UPS, which almost create a duopoly. The largest player in Europe is DHL, which has 32% of the German market. Furthermore, DHL has around 40% in the Asian market and over 50% in overall central Europe, the Middle East and Africa (Economis, 2015 April 10). Therefore, this report will examine these four companies to generate an overall picture of the delivery service industry. The following SWOT analyses will give a general overview of the strengths, weaknesses, opportunities and threats of the industry. Strengths: - Record Growth: Due to structural changes in the transport routes and order quantities in the freight industry, the package and express delivery service are growing much faster than the total freight market. - Dynamic and sustainable growth of the industry is decreasingly susceptible to

economic changes, due to the integration of their services in the everyday live. More and more everyday goods like food and cloth are ordered online and get delivered to the customers' home. - Increase of Efficiency: the transport of goods is getting faster and less costly due to highly efficient infrastructure. Weaknesses - Capacity constraints especially in peak phases: demographic changes resulting in lack of both highly qualified personnel as well as in the field of low-skilled workers. - High dependency on major customers: The proportion of sales from major B2B customers is up to 90% for most companies. Opportunities - Volume increase in parcels: In particular parcel delivery to private consumer is driven by the strong increase in online trading. The proportion of returns is steadily increasing. - Speed is becoming an increasingly important factor in the transport sector. In addition to the online trading of non-food products, also food is becoming more and more important. - Just-in-time production

Transparency in Assessment - Exploring the Influence of Explicit Assessment Criteria *Frontiers Media SA*

In many schools and higher education institutions it has become common practice to share assessment criteria with students. Sometimes it is required for accountability purposes, at other times criteria are used as a means to communicate expectations to students. However, the idea that explicit assessment criteria should be shared with students has been contested. On the one hand, research has shown that explicit criteria may positively

affect student performance, reduce their anxiety, as well as support students' use of self-regulated learning strategies. On the other hand, there are fears that explicit criteria may have a restraining influence on students' learning, as well as limiting their autonomy and creativity. There are also indications of students becoming more performance oriented, as opposed to learning oriented, when being provided with explicit assessment criteria. Taken together, it is not fully understood under which circumstances it is productive for student learning to share explicit assessment criteria, and under which circumstances it is not. In particular, empirical research on the proposed negative effects of sharing criteria with learners is limited and most fears voiced in the literature are based on individual experiences and anecdotal evidence. In this book, we therefore bring different perspectives on transparency in assessment together, in order to further our understanding of how students are influenced by the use of explicit assessment criteria. A deeper understanding of the influence of explicit assessment criteria on students' understanding of criteria, motivation, and learning is equally imperative for future research and educational practice, both of which need to go beyond individual opinions and convictions.

Assessing Competence in Professional Performance across Disciplines and Professions *Springer*

This book examines the challenges of cross-professional comparisons and proposes new forms of performance assessment to be used in professions education. It addresses how complex issues are learned and assessed across and within different disciplines and professions in order to move the process of "performance assessment for learning" to the next level. In order to be better equipped to cope with increasing complexity, change and diversity in professional education and performance assessment, administrators and educators will engage in crucial systems thinking. The main question discussed by the book is how the required competence in the performance of students can be assessed during their professional education at both undergraduate and graduate levels. To answer this question, the book identifies unresolved issues and clarifies conceptual

elements for performance assessment. It reviews the development of constructs that cross disciplines and professions such as critical thinking, clinical reasoning, and problem solving. It discusses what it means to instruct and assess students within their own domain of study and across various roles in multiple contexts, but also what it means to instruct and assess students across domains of study in order to judge integration and transfer of learning outcomes. Finally, the book examines what it takes for administrators and educators to develop competence in assessment, such as reliably judging student work in relation to criteria from multiple sources. "... the co-editors of this volume, Marcia Mentkowski and Paul F. Wimmers, are associated with two institutions whose characters are so intimately associated with the insight that assessment must be integrated with curriculum and instructional program if it is to become a powerful influence on the educational process ..." Lee Shulman, Stanford University

Assembly Language Step-by-Step

Programming with Linux *John Wiley & Sons*

The eagerly anticipated new edition of the bestselling introduction to x86 assembly language. The long-awaited third edition of this bestselling introduction to assembly language has been completely rewritten to focus on 32-bit protected-mode Linux and the free NASM assembler. Assembly is the fundamental language bridging human ideas and the pure silicon hearts of computers, and popular author Jeff Dunteman retains his distinctive lighthearted style as he presents a step-by-step approach to this difficult technical discipline. He starts at the very beginning, explaining the basic ideas of programmable computing, the binary and hexadecimal number systems, the Intel x86 computer architecture, and the process of software development under Linux. From that foundation he systematically treats the x86 instruction set, memory addressing, procedures, macros, and interface to the C-language code libraries upon which Linux itself is built. Serves as an ideal introduction to x86 computing concepts, as demonstrated by the only language directly understood by the CPU itself. Uses an approachable, conversational style that assumes no prior experience in programming of any kind. Presents x86 architecture and assembly concepts through a cumulative tutorial approach that is ideal for self-paced instruction. Focuses entirely on free, open-source software, including Ubuntu Linux, the NASM assembler, the Kate editor, and the Gdb/Insight debugger. Includes an x86 instruction set reference for the most common machine instructions, specifically tailored for use by programming beginners. Woven

into the presentation are plenty of assembly code examples, plus practical tips on software design, coding, testing, and debugging, all using free, open-source software that may be downloaded without charge from the Internet.

Higher Education Computer Science

A Manual of Practical Approaches *Springer*

There is currently a great emphasis on teaching quality in Higher Education. In the UK, the Teaching Excellence Framework and the National Student Survey have contributed significantly to this focus. Additional support for staff to develop teaching skills has also come from the Higher Education Academy, whose fellowship scheme encourages HE staff to focus on their practice in the classroom. The growth in the number of students attending university has resulted in a much wider range of learning styles amongst them. Many students do not fit the idealised average of being adept at learning from primarily text-based media. Two further trends are also driving change and innovation in academic staff teaching. The first is the availability of online teaching materials such as MOOCs. The second is the emphasis now given to student postgraduate employability, represented by certain aspects of the Teaching Excellence Framework that require students not only to know information, but also to be able to articulate that knowledge and to demonstrate their skills. With a desire to enable our students to achieve their highest potential, many staff undertake initiatives to facilitate learning that accommodate a wide range of learning styles. This book focuses on approaches to teaching and learning within the discipline of

Computer Science. The book consists of a selection of chapters that describe a particular teaching activity or topic within Computing in HE, presented in such a way that other practitioners can adopt and adapt them as a way of helping them to develop their own teaching. It provides a number of practical cases of putting theory into practice when teaching Computer Science to both undergraduate and postgraduate students in Higher Education institutions. A chapter on the importance of developing soft skills and a professional online presence is also included as an essential part of preparing the students for their future employment.

The Important Book *Harper Collins*

The important thing about The Important Book -- is that you let your child tell you what is important about the sun and the moon and the wind and the rain and a bug and a bee and a chair and a table and a pencil and a bear and a rainbow and a cat (if he wants to). For the important thing about The Important Book is

that the book goes on long after it is closed. What is most important about many familiar things -- like rain and wind, apples and daisies -- is suggested in rhythmic words and vivid pictures. 'A perfect book . . . the text establishes a word game which tiny children will accept with glee.' -- K.

Classroom Assessment and the National Science Education Standards *National Academies Press*

The National Science Education Standards address not only what students should learn about science but also how their learning should be assessed. How do we know what they know? This accompanying volume to the Standards focuses on a key kind of assessment: the evaluation that occurs regularly in the classroom, by the teacher and his or her students as interacting participants. As students conduct experiments, for example, the teacher circulates around the room and asks individuals about their findings, using the feedback to adjust lessons plans and take other actions to boost learning. Focusing on the teacher as the primary player in assessment, the book offers assessment guidelines and explores how they can be adapted to the individual classroom. It features examples, definitions, illustrative vignettes, and practical suggestions to help teachers obtain the greatest benefit from this daily evaluation and tailoring process. The volume discusses how classroom assessment differs from conventional testing and grading and how it fits into the larger, comprehensive assessment system.

Organizational Change and Information Systems

Working and Living Together in New Ways *Springer Science & Business Media*

It might be particularly relevant to IT practitioners such as information systems managers, business managers and IT consultants. The volume is divided into six sections, each one focusing on a specific theme. Approaches to Assessment that Enhance Learning in Higher Education *Routledge*

This book addresses the need to diversify mainstream forms of assessment currently used in Higher Education in order to re-establish the focus on the learning process. Making assessment central to student learning is about returning to what current research emphasises: the primary beneficiary of assessment should be the student. To achieve this in the assessment context, students and tutors must engage in a process of dialogue and feedback. It seems to be widely accepted that assessment succeeds when the learner monitors, identifies and then is able to 'bridge' the gap between current learning achievements and

agreed goals. It is, however, more questionable whether adequate opportunities are given to students to be active participants in closing what has been termed 'the loop'. Contributors to this book have responded in different ways to the challenge of enhancing learning through assessment, offering reasons for the lack of focus on learning within assessment processes as well as suggesting possible solutions. The chapters demonstrate a balance between innovation and practicality, drawing on the underpinning theories. The result is both rich in discussion and an extremely useful resource for practitioners. This book was originally published as a special issue of *Assessment & Evaluation in Higher Education*.
