- Differential Pressure Switches are commonly used for sensing a difference in pressure between two points in a system
- Vacuum Pressure Switches provide electrical feedback to measure a rise or fall of pressure in a system.

Pressure Switches | RS Components

Differential pressure switches are a particular type of pressure switch that convert a change in the pressure between two systems into an electrical function. The two systems are constantly monitored, and their relative pressure is measured.

How Does a Differential Pressure Switch Work? | Hunker

In differential adjustment, the cut-in pressure can be increased or decreased on the pressure switch, changing the pressure differential. For example, on a 90 psi (cut-in) to 110 psi (cut-out) range pressure switch, you can change the cut-in to either 80 psi or 100 psi while keeping the cut-out at 110 psi. pressure switch differential adjustment

Air Differential Pressure Switch These Air DP Switches are ideal for verifying the correct operation of ventilation systems by monitoring the pressure differential created by air movement and can be used to provide a BS6173:2009 and IGEM/UP/19 compliant interlock when interfaced with any GasGuard system.

Air Differential Pressure Switch - Flamefast Gas Safety

Often used with ovens, dryers, and HVAC systems, these switches detect small differences in pressure. When the differential pressure exceeds your setpoint, the switch is activated. Use

them to automate controls or activate an alarm in your process. Switches are single pole, double throw (SPDT), so they switch one circuit on or off.

Differential Pressure Switches | McMaster-Carr

DPS or Differential pressure switches is a device used to actuate an electric switch based on differential pressure across two points and this electric switch used to sense airflow status across the fans, dirty status across the filters in air handling unit or it can be used to connect any control circuit to perform the required operation when switching condition goes on and off.
