The four main types of carbon-based molecules in organisms are carbohydrates, lipids, nucleic acids, and starches. fatty acids. monosaccharides. proteins. Q. Both animal fats and plant oils are made up of glycerol and phospholipids. fatty acids.

Biology:Chemistry of Life | Other Quiz - Quizizz

Biochemistry or biological chemistry, is the study of chemical processes within and relating to living organisms. A sub-discipline of both chemistry and biology, biochemistry may be divided into three

fields: structural biology, enzymology and metabolism. Over the last decades of the 20th century, biochemistry has become successful at explaining living processes through these three disciplines.

Biochemistry - Wikipedia

While chemistry is a separate field, its principles form the basis of biology. As you learned in the last chapter, all living things demonstrate hierarchical organization. You cannot truly understand the higher levels of organization (such as organisms or ecosystems) without understanding their component parts (like cells, molecules, and atoms).
