Experimental techniques used to investigate stress corrosion cracking (SCC) are described, from the use of constant deformation and constant load specimens in static or dynamic autoclaves to the use of slow strain rate tests with slow strain-rate machines coupled with an autoclave. Crack growth rates are investigated with compact tensile specimens and measured with electric methods (direct current potential drop) or by acoustic emission.

Experimental Methods for Engineers by Jack P. Holman

An experiment is a procedure carried out to support, refute, or validate a hypothesis. Experiments provide insight into cause-and-effect by demonstrating what outcome occurs when a particular factor is manipulated. Experiments vary greatly in goal and scale, but always rely on repeatable procedure and logical analysis of the results. There also exists natural experimental studies. A child may carry out basic experiments to understand gravity, while teams of scientists may take years of systemati
