Abstract: The aim of this project work is to develop a magneto-rheological brake (MRB) system that has performance advantages over the conventional hydraulic brake system. The proposed brake system consists of rotating disks immersed in a MR fluid and enclosed in an electromagnet, which the yield stress of the fluid varies as a function of the magnetic field applied by the electromagnet.

... A magnetorheological damper or magnetorheological shock absorber is a damper filled with magnetorheological fluid, which is controlled by a magnetic field, usually using an electromagnet. This allows the damping characteristics of the shock absorber to be continuously controlled by varying the power of the electromagnet. Fluid viscosity increases within the damper as electromagnet intensity increases. This type of shock absorber has several applications, most notably in semi-active vehicle suspe

An optimal design for the magnetic circuit requires maximizing magnetic field energy in the fluid gap while minimizing the energy lost in the steel flux conduit and non-working areas. Therefore, a new magnetizing system is adopted where the coils are housed within an intermediate longitudinal flux pole piece and wound perpendicularly to the symmetric axis of the damper.
