... In the structural approach we follow a scheme of pattern recognition that is ruled by sub-patterns related to each other. The model is extended to structure and its forms in patterns. There is an increased power in the description of finite automata. The language is PR language which seems primitive, yet it is powerful in pattern recognition.

Pattern recognition - Wikipedia

Syntactic pattern recognition or structural pattern recognition is a form of pattern recognition, in which each object can be represented by a variable-cardinality set of symbolic, nominal features.

Syntactic pattern recognition - Wikipedia

Statistical pattern recognition is straightforward, but may not be ideal for many realistic problems. Patterns that include structural or relational information are difficult to quantify as feature vectors. Syntactic pattern recognition uses this structural information for classification and description.

Hybrid approaches, sometimes referred to as a unified approach to pattern recognition, combine both statistical and structural techniques within a pattern recognition system [4]. Statistical pattern recognition draws from established concepts in statistical decision theory to discriminate among data from different groups based upon quantitative features of the data.

Chapter 1 Pattern Classification

Historically, the two major approaches to pattern recognition are statistical (or decision theoretic), hereafter denoted StatPR, and syntactic (or structural), hereafter denoted SyntPR. The technology of artificial neural networks has provided another alternative, neural pattern recognition, hereafter denoted NeurPR.
