The human male and female reproductive cycles are controlled by the interaction of hormones from the hypothalamus and anterior pituitary with hormones from reproductive tissues and organs. In both sexes, the hypothalamus monitors and causes the release of hormones from the anterior pituitary gland.

13.3 Human Reproduction - Concepts of Biology - 1st ...

The male reproductive part consists of penis, scrotum, testicles (testes), epididymis, vas deferens, ejaculatory ducts, urethra, seminal vesicles, prostate gland and bulbourethral gland. According to Maggi et al. (2016), urethra and penis are part of urinary as well as reproductive system and as males have single openings, therefore, urinary and semen discharge occurs through this single pathway.

Human Reproduction, Growth and Development

Human reproduction is any form of sexual reproduction resulting in human fertilization. It typically involves sexual intercourse between a man and a woman. During sexual intercourse, the interaction between the male and female reproductive systems results in fertilization of the woman's ovum by the man's sperm. These are specialized reproductive cells called gametes, created in a process

called meiosis. While normal cells contains 46 chromosomes, 23 pairs, gamete cells only contain 23 chromosome

Human reproduction - Wikipedia

Human reproductive system, organ system by which humans reproduce and bear live offspring. Provided all organs are present, normally constructed, and functioning properly, the essential features of human reproduction are (1) liberation of an ovum, or egg, at a specific time in the reproductive cycle, (2) internal fertilization of the ovum by spermatozoa, or sperm cells, (3) transport of the fertilized ovum to the uterus, or womb, (4) implantation of the blastocyst, the early embryo developed ...

human reproductive system | Definition, Diagram & Facts ...

The male reproductive tract consists of a pair of testes, which produce the male sex cells called spermatozoa or sperm. The male primary sexual characteristics include the testes, the male sex accessory ducts, the sex accessory glands, and the external genitalia.

Human Reproductive Biology | ScienceDirect

Human reproduction comprises a number of sequential steps. Gametogenesis- production of male (sperm) and female (ovum) gametes Insemination- transfer of male gamete to female genital tract Fertilization- the fusion of gametes to form a zygote
