There are numerous studies using the

Taguchi method in engine design and testing applications. The engine performance related design and calibration work is reviewed here. Baranescu et al. (1989) from Navistar used the Taguchi method and engine cycle simulation to analyze the effects of control factors and noise factors on diesel engine power. The analysis started with the cause-and-effect 'fishbone' diagram to brainstorm design factors.

Taguchi has envisaged a new method of conducting the design of experiments which are based on well defined guidelines. This method uses a special set of arrays called

orthogonal arrays. These standard arrays stipulates the way of conducting the minimal number of experiments which could give the full information of all the factors that affect the performance parameter.
