Propellantless Propulsion By Electromagnetic Inertia

The studies about the inertia of the electromagnetic field as something that could be manipulated for propulsion purposes are not new, a tentative explanation was already undertaken on the basis of the relativistic mechanics of extended bodies under electrostatic pressures (Marchal, 1969).

One of the challenges to create the Space Drive being to discover a self-contained means of propulsion that requires no propellant, it was already shown that a solution to the problem does exist, provided the system is endowed with tensor mass properties. It is found that under the assumption of Minkowski's Energy-Momentum tensor being the right one (Abraham-Minkowski controversy), the ...

Propellantless Propulsion By Electromagnetic Inertia

Quantized inertia, previously known as the acronym MiHsC, is a controversial theory of inertia. The concept was first proposed in 2007 by physicist Mike McCulloch, a lecturer in geomatics at the University of Plymouth, as an alternative to general relativity and the mainstream Lambda-CDM model. According to McCulloch, quantized inertia would also

be able to explain various anomalous effects such as the Pioneer and flyby anomalies, as well as controversial propellantless propulsion experiments so

Okay, so that's a more reasonable/acceptable answer: "We simply don't know yet." But then the

corollary to this is that we can't definitively rule out the ability to do propellant-less propulsion, since we don't know yet what causes inertia.

Propellantless Field Propulsion and application

ASPS, which in Italian means "Association for Space Propulsion Development", in 1992 invented an electromagnetic propellantless thruster called PNN that can revolutionize space exploration. After more than 20 years of experimentation, the engine is close to its practical application.
