### **Using Similar Triangles To Find**

Sometimes you can use similar triangle to find lengths that cannot be measured easily using a ruler or other measuring device. You can use indirect measurement to find lengths that are difficult to measure directly. One method of indirect measurement uses the fact that light reflects off a mirror at the same angle at which it hits the mirror.

### **Similar Triangles (solutions, examples, videos)**

Example: Find lengths a and b of Triangle S. Step 1: Find the ratio. We

know all the sides in Triangle R, and We know the side 6.4 in Triangle S. The 6.4 faces the angle marked with two arcs as does the side of length 8 in triangle R. So we can match 6.4 with 8, and so the ratio of sides in triangle S to triangle R is: 6.4 to 8

### **Similar Triangles - MATH**

### **Using Similar Triangles (examples, solutions, videos ...**

The length of each side in triangle DEF is multiplied by the same number, 3, to give the sides of triangle ABC. In general: If two triangles are similar, then the corresponding sides are in the same ratio. Example 26. Find the value of  $x$  in the following pair of triangles. Solution: Note:

### **Similar Triangles - mathsteacher.com.au**

o Prove that two triangles are similar

using appropriate criteria Another View of Congruence and Similarity Let's review the task of proving that two triangles are similar. Recall that congruence means that the measures of all three sides and all three angles are the same for the two triangles.

### **How to Calculate Similar Triangles in Geometry ...**

In geometry two triangles are similar if and only if corresponding angles are congruent and the lengths of corresponding sides are proportional. Let us look at some examples to understand how to find the lengths of missing sides in similar triangles. Example 1 : Find the measures of the missing sides if  $\triangle KLM \sim \triangle NOP$ .  $k = 9$ ,  $n = 6$ ,  $o = 8$ ,  $p = 4$ .

### How to Find the Missing Sides of Similar Triangles

Since the triangles ABC and DBE are similar triangles, corresponding side lengths are proportional. So, we have.  $AB / DB = BC / BE$ . Substitute the lengths from the figure.  $h / 6 = 56 / 16$ .  $h / 6 = 7 / 2$ . Multiply both sides by 6.  $(h/6) \cdot 6 = (7/2) \cdot 6$ .  $h = 21$ . So, the height of the tree is 21 ft. Example 3 :

### Using Similar Triangles to Measure Height

Some triangles, called similar triangles, have the same angles but different side lengths. This changes the ratio of the triangle, making it bigger or smaller, without changing the degree of its three angles. Below, we will examine the many ways to discover the side lengths and

angles of a triangle.

### How to Calculate the Sides and Angles of Triangles ...

SSS stands for "side, side, side" and means that we have two triangles with all three pairs of corresponding sides in the same ratio. If two triangles have three pairs of sides in the same ratio, then the triangles are similar.

### How To Find if Triangles are Similar - MATH

Triangles  $\triangle ABC$  and  $\triangle DEC$  are similar triangles because all three of their corresponding angles are congruent. Therefore, the ratios of their corresponding sides are equal.  $AB / DE = BC / EC$   $AB / 6 = BC / 10$
