Kinetics Of Phase Transitions

The first element of the phase transformation kinetics rule in the R L models family takes the form of two families of curves $\Psi \propto \pi^{1-2z} = \text{const}$, $\alpha = 1, 2$ that are different for forward and reverse phase transitions. They define in π^{1-2-z} space possible segments of active monotonic phase transitions ($d z \neq 0$).

ABSTRACT. A new derivation is presented for the last stage of phase separation in the kinetics of a first order phase transition, precipitation, where Ostwald ripening is the dominant mechanism. We use a time scaling technique and derive the power law time dependence and distribution function for the size of the particles of the new phase.

The detailed kinetic analysis shows that the phase transitions are apparently expressed by the first-order kinetics and that the transition between the Li1 and Li1/2 phases is faster than that between the Li1/2 and Li0 phases, which leads to kinetically asymmetric behavior of the LiNi 0.5 Mn 1.5 O 4 electrode. The obtained rate constants can be used to characterize and optimize the rate ...

Phase transition - Wikipedia

Phase transitions between semiconducting 2H and metallic 1T (or 1T') molybdenum disulphides (MoS 2) are explored comprehensively by first-principles calculations. The nucleation of a 1T (or 1T') nucleus in a 2H MoS 2 lattice, the formation of the 2H-1T (1T') interfaces and the kinetics of interface propagation during phase transition were thoroughly investigated in this study.
