What is a fluoroscopy-guided lumbar nerve root injection? A nerve root injection is an injection of local anaesthetic and steroid (anti-inflammatory) medication around a nerve in the lower back as it leaves the spine under X-ray guidance.

Fluoroscopy-guided lumbar nerve root injection

Fluoroscopy is an imaging technique that uses X-rays to obtain real-time moving images of the interior of an object. In its primary application of medical imaging, a fluoroscope allows a physician to see the internal structure and function of a patient, so that the pumping action of the heart or the motion of swallowing, for example, can be watched. This is useful for both diagnosis and therapy and occurs in general radiology, interventional radiology, and image-guided surgery. In its simplest f

Fluoroscopy - Wikipedia

Position the patient in a basic supine position so that the bottom of the c-arm can go under the table below the knee. Bend the knees roughly 90 degrees and put a roll under it so the patient’s legs can stay relaxed. This opens up the joint space a bit. Having someone help hold the patient’s foot can be

helpful.
