Machine element refers to an

elementary component of a machine. These elements consist of three basic types: structural components such as frame members, bearings, axles, splines, fasteners, seals, and lubricants, mechanisms that control movement in various ways such as gear trains, belt or chain drives, linkages, cam and follower systems, including brakes and clutches, and control components such as buttons, switches, indicators, sensors, actuators and computer controllers. While generally not

Every mechanical system involves relative motion between different machine elements. Relative motion leads to loss of power due to friction and deterioration of contacting surfaces due to wear. Bearings are the machine elements that permit relative motion between two components and transmission of load from one to the other, with minimum friction. For example, there is relative motion between a transmission shaft and the housing, in which it is supported.
