Rheology studies the flow and deformation of matter and is an important tool to characterize fundamental material properties of food systems. Fluid mechanics is the foundation of food rheology and the correlation of stress and strain can be used to describe rheological properties of food systems in different models. The Herschel-Bulkley model is commonly adopted for fluids, while semisolid materials are presented by models that describe both solid and liquid-like properties.

Rheological Testing of Foods. Rheology is the science concerned with the deformation and flow of matter. Most rheological tests involve applying a force to a material and measuring its flow or change in shape. Rheology is important in a number of different areas of food science.
