NOLOCK is a query optimizer hint. It has advantages, and disadvantages, and it potentially breaks one of the fundamental rules of databases – data integrity through the use of a locking mechanism....

The Effect of NOLOCK on Performance - SQLServerCentral

Applies to: SQL Server (all supported versions) Azure SQL Database. Database administrators often need to identify the source of locks that are hindering database performance. For example, you suspect that a performance issue on your server could be caused by blocking. When you query the sys.dm_exec_requests, you find several sessions in a suspended mode with a wait type indicating that a lock is the resource being waited on.

Determine Which Queries Are Holding Locks - SQL Server ...

Lock escalation is the process of converting many fine-grained locks (such as row or page locks) into table locks. Microsoft SQL Server dynamically determines when to perform lock escalation. When making this decision, SQL Server takes into account the number of locks that are held on a particular scan, the number of locks that are held by the whole transaction, and the memory that is being used for locks in the system as a whole.

How to resolve blocking problems that are caused by lock ...
