Calculate the equation of the circle that has its center at $(2, -3)$ and has the x-axis as a tangent. In this question, the circle has an x-axis as a tangent. A tangent is a straight line that touches a curve. This means that the "y coordinate" will be zero. We will use the distance formula to find the radius.

Circle - Free math help

Answer. The equation is in the form $(x - h)^2 + (y - k)^2 = r^2$, so we have a circle with centre at $(2, 3)$ and the radius is $r = \sqrt{16} = 4$.
 $(x - 2)^2 + (y - 3)^2 = 4^2$

Analytic Geometry is a branch of algebra, a great invention of Descartes and Fermat, which deals with the modelling of some geometrical objects, such as lines, points, curves, and so on. It is a mathematical subject that uses algebraic symbolism and methods to solve the problems.

Analytic Geometry (Coordinate Geometry) - Formulas & Examples

In analytic geometry, also known as coordinate geometry, we think about geometric objects on the coordinate plane. For example, we can see that opposite sides of a parallelogram are parallel by writing a linear equation for each side and seeing that the slopes are the same.
