The 10V ur-quattros (WR, WX, MB and GV engines) are notorious for cracked exhaust manifolds. The cause and solution are contentious. The same problems occasionally occur on the Audi 100 and Audi 200 1B and MC engines. The primary cause of manifold cracking is not heat, design or poor metallurgy on Audi's part. It is the unnoticed failure of the right side engine mount causing the right edge of the sump to rest on the subframe or the exhaust downpipe to contact the body.
