Introduction To Subsea Production System

In subsea production system design, a whole-system modeling approach is used to define the hardware requirements and operating strategies (Kaczmarski and Lorimer, 2001; Arciero, 2017; Bomba et al., 2018). To optimize the system design, software models for each component are used to understand the trade-offs that result from balancing steady-state and transient operations with flow assurance management:
