Population Genetics And Speciation Skills Answer Key

A population is a group of individuals that live in the same area and whose alleles are mixed through reproduction. Speciation begins when barriers to reproduction within a population lead to two reproductively isolated populations whose alleles are no longer mixing. Speciation is the process through which new species form.

Population Genetics And Speciation Skills Answer Key

Population Genetics and Speciation. Section 1 Vocabulary Pretest. Population Genetics. Microevolution. Gene Pool.

Allele Frequency. Phenotype Frequency. Total genetic information in a population. Portion of gene copies of a given allele. Study of the frequency and interaction of alleles and genes in populations.

Chapter 16

Peripatric speciation is a form of allopatric speciation that occurs when populations that have become isolated have very few individuals. Through this process, the population goes through a genetic bottleneck. Within the small sub-population, organisms which are able to survive within the new environment may carry genes that were rare within the main population but that cause a slight variation to behavior or morphology.

Speciation - Definition and Types | Biology Dictionary

Species originate frequently by natural selection. A general mechanism by which this occurs is ecological speciation, defined as the evolution of reproductive isolation between populations as a result of ecologically-based divergent natural selection. The alternative mechanism is mutation-order speciation in which populations fix different mutations as they adapt to similar selection pressures.

Genetics and ecological speciation | PNAS

Population genetics is a subfield of genetics that deals with genetic differences within and between populations, and is a part of evolutionary biology. Studies in this branch of biology examine such phenomena as adaptation , speciation , and population structure .
