Earth's Tectonic Plates When the concept of seafloor spreading came along, scientists recognized that it was the mechanism to explain how continents could move around Earth's surface. Scientific data and observation now allows us to merge the ideas of continental drift and seafloor spreading into the theory of plate tectonics.

Plate Tectonics | Earth Science

When the solar system was still forming, the Earth was a giant ball of molten rock (Space.com's basic article on planetary formation). Because the Earth is so massive, it took a long time for the outer layer (the crust) to cool. Tectonic plates most likely formed about 3.2 billion years ago as the Earth was cooling.
