### 110 Introduction to Partial Differential Equations

In mathematics, a partial differential equation (PDE) is an equation which imposes relations between the various partial derivatives of a multivariable function. The function is often thought of as an "unknown" to be solved for, similarly to how  $x$  is thought of as an unknown number, to be solved for, in an algebraic equation like  $x^2 - 3x + 2 = 0$ . However, it is usually impossible to write down explicit formulas for solutions of partial differential equations.

A partial differential equation is an equation that involves  $x$ ,  $u$ , and partial derivatives of  $u$ . Quite often,  $x$  represents only spatial variables. However, many equations are evolutionary, meaning that  $u = u(x, t)$  depends also on time  $t$  and the PDE has time derivatives.
