Green Energy CRC Press

Green Energy: Sustainable Electricity Supply with Low Environmental Impact defines the future of the world’s electricity supply system, exploring the key issues associated with global warming, and which energy systems are best suited to reducing it. Electricity generation is a concentrated industry with a few sources of emissions, which can be controlled or legislated against. This book explains that a green sustainable electricity system is one whose construction, installation, and operation minimally affect the environment and produce power reliability at an affordable price. It addresses the question of how to build such an electricity supply system to meet the demands of a growing population without accelerating global warming or damaging the environment. The green argument for conservation and renewable energies is a contradiction in terms. Although they produce no emissions, because renewable systems are composed of a large number of small units, a considerable amount of energy is required to produce, erect, and maintain them. This book is a response to that conundrum, answering key questions, such as: How can renewables be exploited to contribute the greatest energy input? Should coal be used for clean fuel and chemical production rather than for power generation? How quickly can we start to build the Green Energy system? The author has more than forty years of experience as an international journalist reporting on power-generating technologies and on energy policies around the world. Detailing the developmental history, and current state, of the global nuclear industry, he discusses the dire, immediate need for large quantities of clean, emission-free electric power, for both domestic and industrial uses. This book details how current technologies—particularly nuclear, combined cycle, and hydro—can be applied to satisfy safely the growing energy demands in the future.

Louise Bourgeois *Hatje Cantz Pub*

Anyone who has stood underneath one of Louise Bourgeois' "Mamans"-her sculptures of spiders, symbolizing maternal protection-understands the singularity of her artistic approach. Stylistically, her pioneering body of work is complex: she deployed a wide variety of materials and practices-drawings, etchings, installations, works made of fabric, sculptures in wood, marble, bronze, latex, plaster and hemp-to address universal questions. This extensive monograph provides an overview of Bourgeois' artistic development, and presents a large number of works, including some that have never before been reproduced. The volume is grouped into themes that characterize her oeuvre, including memory, trauma, relationships, sexuality, fear and the difficulties of being an artist and mother at the same time. Personal photographs further document the artist's childhood and family life, with several letters and documents being made available for the first time. Born in Paris, where she studied with Fernand Léger, Louise Bourgeois (1911-2010) moved to New York in 1938, where her first solo exhibition was held at the Bertha Schaefer Gallery in 1945. She quickly developed a sculptural vocabulary that drew inventively and equally on Abstract Expressionism, Surrealism and psychoanalysis. Bourgeois had her first retrospective in 1982, at The Museum of Modern Art in New York. She died in May 2010.
