Solutions Stoichiometry

In stoichiometric calculations involving solutions, a given solution's concentration is often used as a conversion factor. Terms stoichiometry the study and calculation of quantitative (measurable) relationships of the reactants and products in chemical reactions (chemical equations)

Solution Stoichiometry | Introduction to Chemistry

As we learned previously, double replacement reactions involve the reaction between ionic compounds in solution and, in the course of the reaction, the ions in the two reacting compounds are "switched" (they replace each other). Because these reactions occur in aqueous solution, we can use the concept of molarity to directly calculate the number of moles of reactants or products that will ...

When doing stoichiometry with solutions you need to know the concentration of reactants in your solvent. Specifically you need to know the moles per unit of solvent. There are many different ways of doing this, but I'm going to use molarity. Molarity is simply moles per liter. To find molarity of a solution we use $n/L=M$ (M stands for molarity). To use it for stoichiometry arrange it so it looks like $M \cdot L=n$.
