TMEV,,(RTV (or Theiler's-like virus of rats)),, y Vilyuisk human encephalomyelitis virus, Saffold virus. – RTV and TMEV are small non-enveloped, RNA viruses. • Moderate environmental persistence and resistance to disinfection are expected. Rat Theilovirus (RTV) • Epizootiology – Prevalence – moderate. The CR diagnostic laboratory finds about 2% of rats serum samples from

INFECTIOUS DISEASES OF LABORATORY RATS

Lymphocytic Choriomeningitis Virus (LCMV) Testing of purpose-bred mice and murine tumors and cell lines has significantly decreased the potential for transmission of LCMV in the laboratory setting. However, to reduce the potential for transmission, vigilance in screening all murine tissues is required. Tumors may acquire LCMV as an adventitious virus without obvious effects on the tumor. The virus may survive freezing and storage in liquid nitrogen for long periods.
