Mpfi Engine Sensors

There are a number of sensors used in the MPFI engine. At the time when the inputs are given to the car's computer, it begins to read the given sensors. The things which can be known from the sensors are listed below: The engine temperature of the vehicle. The speed at which the engine is running. The engine load. The position of the accelerator.

Sensors located in the vehicle's fuel engine system helps the control unit to determine when certain functions need to occur. Typical sensors used in multi-point fuel injection system are as follows: 3. Manifold Absolute Pressure (MAP) sensor: This sensor is located in the intake manifold and is used to measure its pressure.

Types of Sensors Used in Multi-Point Fuel Injection System

But, MPFI with ECU which consists of many sensors acts as an intelligent system. A few advantages of MPFI over carburetor is . 1. Good engine response . 2. Engine crank not necessary during cold start. 3. Uniform air-fuel mixture and higher fuel efficiency.

Determining how much fuel to supply. The primary factor used in determining the amount of fuel required by the engine is the amount (by weight) of air that is being taken in by the engine for use in combustion. Modern systems use a mass airflow sensor to send this information to the engine control unit .
