Maintenance procedures

Planned preventive maintenance (PPM), more commonly referred to as simply planned maintenance (PM) or scheduled maintenance, is any variety of scheduled maintenance to an object or item of equipment. Specifically, planned maintenance is a scheduled service visit carried out by a competent and suitable agent, to ensure that an item of equipment is operating correctly and to therefore avoid any unscheduled breakdown and downtime.

Maintenance (technical) - Wikipedia

Preventive maintenance includes measures such as systematic and routine cleaning, adjustment and replacement of equipment parts at scheduled intervals. Manufacturers generally recommend a set of equipment maintenance tasks that should be performed at regular intervals: daily, weekly, monthly or yearly.

3-4: Implementing an equipment maintenance programme

There are two types of maintenance: routine maintenance is planned and focuses on preventing future problems, while corrective maintenance is reactive and happens when equipment goes wrong and needs to be fixed. Maintenance can be a high-risk activity.

Maintenance of equipment in the workplace | Fit For Work

Process equipment can be used for tasks a varied as storage, controlling flow, and containing chemical reactions. There are two major types of process equipment: Fixed Equipment and Rotating Equipment. Fixed equipment refers to any piece of process

equipment that generally does not move.

Process Equipment | Inspectioneering

Maintenance is defined as a process in which working condition of plant or machinery is maintained at the optimum level as to give maximum output. Maintenance is done through repair, partial replacement and total replacement. Following is the significance of the maintenance policy:

Maintenance Policy and Repair - Need and its Importance

1. SCOPE This procedure defines the actions and responsibilities of the maintenance manager in maintaining the Machinery & equipment in good working condition.
