coordination polymers design analysis and application

Coordination polymers and MOFs, in which a metal complex links to another one by a bridging organic ligand, have also been used as approach to immobilize catalysts. 192-194 Usually, these materials present permanent porosity, a well-established structure by X-ray studies, and featuring strong (covalent) bonds between the metal atoms and the linkers, leading to good chemical and thermal stability in addition to the low solubility in the common solvents. Despite the recent developments, the ...
