Web Services Security

Web Services Security (WS Security) is a specification that defines how security measures are implemented in web services to protect them from external attacks. It is a set of protocols that ensure security for SOAP-based messages by implementing the principles of confidentiality, integrity and authentication.

Web Services Security (WS Security)

- Definition from ...

Web Services Security (WS-Security, WSS) is an extension to SOAP to apply security to Web services. It is a member of the Web service specifications and was published by OASIS . The protocol specifies how integrity and confidentiality can be enforced on messages and allows the communication of various security token formats, such as Security Assertion Markup Language (SAML), Kerberos , and X.509 .

WS-Security - Wikipedia

Security is critical to web services. However, neither XML-RPC nor SOAP specifications make any explicit security or authentication requirements. There are three specific security issues with

web services – Confidentiality;
Authentication; Network Security;
Confidentiality

services to elevate your security in the cloud. Raise your security posture with AWS infrastructure and services. Using AWS, you will gain the control and confidence you need to securely run your business with the most flexible and secure cloud computing environment available today.

Cloud Security - Amazon Web Services (AWS)

Web services need to authorize web service clients the same way web applications authorize users. A web service needs to make sure a web service client is authorized to perform a certain action (coarse-grained) on the requested data (fine-grained). Rule: A web service should authorize its clients whether they have access to the method

in question. Following authentication, the web service should check the privileges of the requesting entity whether they have access to the requested resource.
