Patterns Of Human Population Growth

The world's human population is growing at an exponential rate. Humans have increased the world's carrying capacity through migration, agriculture, medical advances, and communication. The age structure of a population allows us to predict population growth. Unchecked human population growth could have dire long-term effects on our environment.

Human Population Growth | Biology II

Key Theme 1: Patterns of Population. This theme comes first because the number of men and women in the world, the distribution of populations around the globe, and the migration patterns of people from one region to another have always had a large effect on all other types of change. The study of population size, density, and distribution is called demography.
