A sensitivity analysis was performed to resize the concrete core, the outriggers, and the belt truss members from the initial hand calculation sizes. Core wall thicknesses were optimized across the height of the building. Vertical columns and transfer columns were redesigned as a series of steel built-up shapes through energy optimization methods.

STRUCTURAL DESIGN OF HIGH-RISE BUILDINGS. Abstract. High-rise buildings are exposed to both static and dynamic loads. Depending on the method used and how the structure is modelled in finite element software the results can vary. Some of the issues and modelling techniques, introduced below, are investigated in this Master's thesis.
