Automata and Mechanical Toys by Clare Pattinson - Kickstarter

Fire the Inventor runs practical automata or mechanical toy workshops for schools, colleges, science centres, museums and special events. The workshops combine art, science and technology. Workshop are accompanied with a collection of moving toys and automata for inspiration, context and study. Participants learn about the science of basic mechanisms and linkages while letting their artistic imaginations run free.

Fire The Inventor

Many modern toys now use electric motors and plastic gears to achieve this goal but the mechanical principles behind them

go back thousands of years. If you look in specialist art magazines you will see exhibitions showing of the skills of the modern automata makers.

An automaton is a relatively self-operating machine, or a machine or control mechanism designed to automatically follow a predetermined sequence of operations, or respond to predetermined instructions. Some automata, such as bellstrickers in mechanical clocks, are designed to give the illusion to the casual

observer that they are operating under their own power. Since long ago, the term is commonly associated with automated puppets that resemble moving humans or animals, built to impress and/or t

Wind up toys. These mechanical toys are powered by using a key and a metal spring. The spring slowly untwists and passes its energy to the toy gears. Like I said, this is probably the largest category. Gravity toys. They use the gravity to provide motion. For example these are cars powered by initial hand charging; Rubber band toys. They are similar to the spring toys, but usually simpler.
