Most marine FWC thermostats open at 160°F and will be fully open at approximately 180°F. A new clean system under moderate load should operate at the lower end of this range and a dirty system under full load might operate in the upper range. Any temperature that reads outside of this range is abnormal and should be investigated.

Troubleshooting a Marine Fresh Water Cooling System ...

1. Raw Water Cooling Systems. This style sucks the salt-water straight out of the ocean, through a strainer (filter), and then cycles it through your engine block. Water is then usually exited through the exhaust and out the back, or below the boat. 2. Closed Loop Cooling Systems. There are a number of different ways the cooling system can be setup - closed loop half, or closed loop full.

Cooling System For 454 Marine Engine

The standard raw water system, and the fresh water (commonly known as the closed) cooling system. Raw Water Cooling Systems Raw water cooling systems draw water from outside the boat (seawater or lake water). Water is pumped from the source to the engine block then the engine circulation pump forces the raw water through the engine block and the water is expelled through the exhaust. Raw water cooling systems are relatively simple and the standard cooling system on most Marine Engines.
