Complex Networks: Principles, Methods and Applications

An important structure characteristic of metabolic networks and many other complex networks is the power law degree distribution: most of the nodes in the network have a low connection degree, whereas few nodes have a very high connection degree (Albert et al., 2000; Jeong et al. 2000, 2001; Strogatz 2001; Wolf et al. 2002; Bray 2003). The high-degree nodes dominate the network structure and are called hubs of the network.
