Cytokines And The Cns

Cytokines are involved both in the immune response and in controlling various events in the central nervous system, that is, they are equally immunoregulators and modulators of neural functions and neuronal survival. On the other hand, cytokine production is under the tonic control of the peripheral and the central nervous system and the cytokine balance can be modulated by the action of neurotransmitters released from nonsynaptic varicosities [131].

Cytokines are pleiotrophic proteins that coordinate the host response to infection as well as mediate normal, ongoing signaling between cells of nonimmune tissues, including the nervous system. As a consequence of this dual role, cytokines induced in response to maternal infection or prenatal hypoxia can profoundly impact fetal neurodevelopment.

Gut Commensalism, Cytokines, and Central Nervous System ...

In multiple sclerosis, inflammatory cytokines disrupt the blood-brain barrier and allow for the migration of peripheral immune cells into the central nervous system. When they have migrated into the central nervous system, B cells and plasma cells produce antibodies against the myelin sheath that insulates neurons, degrading the myelin and slowing conduction in the neurons.

Neuroinflammation - Wikipedia

Four mechanisms for brain signaling by cytokines have been postulated : 1) passive transport of cytokines into the brain at circumventricular sites lacking a blood-brain barrier; 2) binding of cytokines to cerebral vascular endothelium, thereby inducing the generation of secondary messengers such as prostaglandins and nitric oxide; 3) carrier-mediated transport of cytokines into the brain ...
