Iron Nail In An Aqueous Solution

Answer

After keeping an iron nail in copper sulphate solution for some time undisturbed, we see that the blue copper sulphate solution becomes green and a fine reddish brown layer of copper is seen on the iron nail. The reaction taking place here is $\text{Fe} + \text{CuSO}_4 \rightarrow \text{FeSO}_4 + \text{Cu}$

(precipitate). So the colour of the solution change because of the formation of ferrous sulphate and the reddish brown layer on the iron nail is the copper precipitate formed in the chemical reaction.
