Nature Of Electromagnetic Waves Answer

Key Concept: An
 electromagnetic wave
 consists of vibrating
 electric and magnetic
 fields that move
 through space at the
 speed of light. • An
 electromagnetic wave
 is a transverse wave
 that carries electrical
 and magnetic energy.
 The energy is called
 electromagnetic
 radiation. Light is an
 example of an
 electromagnetic wave.

The Nature of Electromagnetic Waves

The frequency of the
 waves is the same as
 the frequency of

oscillations of the particles which is determined by the frequency of the power source. The speed of the waves is the speed of light $c = 3 \times 10^8 \text{ m/s}$, because the waves are light. For any kind of wave, the frequency, wavelength, and wave speed are related by:
(B21.1) $v = \lambda f$

EM waves are modulated EM radiation such like in radio waves. The misunderstanding in the three termina comes from the fact

that photons have an electric and a magnetic field component and this components oscillate during the propagation along their trajectory.

Answers [EPUB]

An electromagnetic wave travels or propagates in a direction that is oriented at right angles to the vibrations of both the electric (E) and magnetic (B) oscillating field vectors, transporting energy from the radiation source to an undetermined final destination. The two oscillating energy fields are mutually perpendicular (illustrated in Figure 2) and vibrate in phase following the mathematical form of a sine wave.

Electromagnetic Radiation - The Nature of Electromagnetic ...
EM waves propagate

when an electric field oscillating in one plane produces a magnetic field oscillating in a plane at right angles to it, which produces an oscillating electric field, and so on. The propagation of electromagnetic waves can be described as mutual induction. The changing electric field is responsible for inducing the magnetic field and vice versa.
