Compound Inequalities

Form G Compound

Inequalities is a

method to find the

variable value for the

given compound

inequalities. The two

inequalities would be

joined by the word

'and' or 'or'. It is

presented in a number

line. When the arrow

points away from each

other in the number

line,

3 6 Compound Inequalities Form G - antigo.proepi.org.br

A compound inequality

is a statement of two

inequality statements

linked together either

by the word or or by

the word and.

Sometimes, an and

compound inequality is

shown symbolically,

like

$a < x < b$,

and does not even

need the word and.

Because compound

inequalities represent

either a union or

intersection of the

individual inequalities,

graphing them on a

number line can be a

helpful way to see or

check a solution.

Example 3. Solve for x:

$$-12 \leq 2x + 6 \leq 8.$$

Since this compound

inequality has no

connecting word

written, it is

understood to be

"and." It is translated

into the following

compound sentence.

$-9 \leq x$ indicates all the

numbers to the right of

and including -9 , and x

≤ 1 indicates all the

numbers to the left of

and including 1. The intersection of these graphs is the numbers between -9 and 1 , including -9 and 1 .
