CHAPTER 3. PROOFS 32 Definition 3 If q and r are real numbers, r is a multiplicative inverse for q if $q \cdot r = 1$. In general, a statement of the form “for all x in A , $P(x)$ ” is false exactly when there is some value y in A for which $P(y)$ is false. So, to disprove a universal claim, we need to prove an existential statement.

the end of Section I: Chapter 3. using algebra EXAMPLE 3: Prove the identity $1 - \cos^2 \theta = \sin^2 \theta$. The left side is more "complicated", so we'll start with it: $1 - \cos^2 \theta = 1 - \cos \theta \cos \theta = 1 - \cos \theta \sin \theta + \sin \theta \sin \theta = 1 - \cos \theta \sin \theta + \sin^2 \theta$. The right side is $\sin^2 \theta$. So we need to show that $1 - \cos \theta \sin \theta + \sin^2 \theta = \sin^2 \theta$. This is true because $1 - \cos \theta \sin \theta = \sin^2 \theta$. So the identity is true.

An ontological argument is a philosophical argument, made from

an ontological basis, that is advanced in support of the existence of God. Such arguments tend to refer to the state of being or existing. More specifically, ontological arguments are commonly conceived a priori in regard to the organization of the universe, whereby, if such organizational structure is true, God must exist.
