When thinking of translational research, two approaches are possible: Firstly, mutations associated with increased or decreased risk for cardiovascular disease may be identified. The mechanisms underlying these observations need to be confirmed in vitro and in vivo , allowing the development of specifically designed therapies, which in turn need to be tested in randomized clinical trials (e.g. PCSK9 antibodies).

Translational atherosclerosis research: From experimental ...

Recent advances in translational research using noninvasive imaging modalities, including 18 F-fluorodeoxyglucose PET and cardiac CT, have enabled us to visualise perivascular inflammation in the pathogenesis of coronary artery spasm. These modality approaches appear to be clinically useful as a non-invasive tool for examining the presence and severity of vasospastic angina.

Coronary Artery Spasm Perivascular Adipose Tissue ...

Coronary artery disease (CAD) is a leading cause of death worldwide. Prevention, diagnosis and clinical interventions are dependent on the conventional risk factors like hypertension, diabetes and obesity. However, these conventional risk factors do not completely identify high risk individuals. One major hurdle in the improvement of diagnosis and treatment for CAD is the lack of integration of

knowledge from different areas of research like molecular, clinical and drug development.

Introduction: Peripheral artery disease (PAD) is associated with heightened ischemic and bleeding risk in patients with acute coronary syndrome (ACS). With this study from real-life patients, we try to analyze the balance between ischemic and bleeding risk during treatment with dual antiplatelet therapy (DAPT) after an ACS according to the presence or not of PAD.
