Adsorption can also be used to purify intake or circulating air streams and in fractionization of certain gases. The adsorption process can be both a physical and chemical process. In physical adsorption, the adsorbate molecules (the contaminate) adhere to the adsorbent materials in a physical bonding force referred to as "van der Waals forces".

The adsorption technology is based on the sorption of certain substances by molecular sieves with the resulting air mixture separation. The adsorption technology allows efficiently producing such gases as nitrogen and oxygen from atmospheric air. Plants operation is based on the pressure swing adsorption principle with the feed air pressure exceeding the atmospheric level at the adsorption stage, and depressurization to the atmospheric pressure at the desorption stage.

Adsorption technology - GRASYS

Adsorption is the accumulation of concentration at a surface and is the consequence of interactive forces of physical attraction between the surface of porous solids and component molecules being removed from the bulk phase. During the twentieth century, adsorption technology survived as a means of purifying and separating both gases and liquids.

Pressure swing adsorption is a technology used to separate some gas species from a mixture of gases under pressure according to the species' molecular characteristics and affinity for an adsorbent material. It operates at near-ambient temperatures and differs significantly from cryogenic distillation techniques of gas separation. Specific adsorbent materials are used as a trap, preferentially adsorbing the target gas species at high pressure. The process then swings to low pressure to desorb the

Vacuum Negative Pressure Adsorption Technology - Immetech

Adsorption refers to the collecting of molecules by the external surface or internal surface (walls of capillaries or crevices) of solids or by the surface of liquids. Absorption, with which it is often confused, refers to processes in which a substance penetrates into the actual interior of crystals, of blocks of amorphous solids, or of liquids. . Sometimes the word sorption is used to ...
