Brain Dopaminergic Systems: Imaging with Positron ...

DAT brain scan. This is a test to look at the level of dopamine receptor cells in the brain using a small amount of an iodine based radioactive material. Dopamine is a chemical messenger that transmits messages between nerve cells and muscles. With Parkinson's Disease the dopamine cells degenerate causing the patient to experience problems with movements, such as walking and dexterity.

DAT brain scan - UHS

The combination of molecular imaging using positron emission tomography (PET) with functional magnetic resonance imaging (fMRI) specifically implicates striatal D2-type dopamine receptors (i.e., D2 and D3) and corticostriatal connectivity in cognitive control.

Human Brain Imaging Links Dopaminergic Systems to Impulsivity.

Dopaminergic imaging discriminates patients with Parkinson's disease from healthy individuals, identifying presynaptic dopaminergic deficits in the caudate and putamen with high specificity and sensitivity, even in early disease (Weng et al., 2004; Shih et al., 2006; Eshuis et al., 2009), and has the potential to discriminate between neurodegenerative parkinsonism and its mimics. In clinically uncertain cases, dopaminergic imaging may assist in confirming or excluding nigrostriatal ...
