Exploring Intermolecular Forces Lab Answers

Exploring Intermolecular Forces Lab. Background: Intramolecular forces are forces acting on atoms within ionic crystals or molecules. Intramolecular forces are responsible for many macroscopic properties such as electrical conductivity, hardness, and luster. Other properties of matter such as boiling point, vapor pressure, and surface tension are best explained by the forces action between molecules, intermolecular forces.

Exploring Intermolecular and Intramolecular Forces. Topics: Temperature, Attractive Forces, and Phase Changes. In the context of phase changes, students infer the strength of electrical forces within and between particles. Students conduct an investigation of vapor pressure, comparing the macroscopic, earth's water cycle, to the microscopic, the intermolecular forces of water and other gases in the atmosphere.

In today's lab we will examine the attractive forces that hold molecules together and the disruptive forces that break them apart. The forces between molecules that hold molecules together are called Intermolecular Forces (IMF) and are comprised of London dispersion forces (LDF), dipolar forces, and hydrogen bonding (H-bonding). The forces
