In medical ultrasound systems, spectral Doppler is a powerful tool for non-invasive estimation of velocities in blood vessels (see, e.g., and the references therein). The data for the estimation is created by focusing the ultrasound transducer array along a single direction and sampling data at the depth of interest.

Blood velocity estimation using ultrasound and spectral ...

In this work, we have opted to use a solid phantom to test our methods over a large range of velocities to avoid problems of Brownian motion and pulsating flow associated with the flow phantoms. The M-mode signal was collected using instrumentation discussed in . The performance of the PCA-based velocity estimation method was tested using 32-point signals with both the uniform and nonuniform sampling patterns described previously.
