Weight of Round Bar can be calculated  
by multiplying the Volume (v) with  
Density(p) of Material. Weight (w) =  
Volume (v) \* Density (p)

### **Calculate Weight of Round Bar | Metal Weight Calculator**

For a pipe use its length instead of  
height: pipe volume =  $\pi * \text{radius}^2 * \text{length}$ , where radius = inner diameter/2.  
The volume of a pipe is equal to the  
volume of a liquid inside (if a pipe is fully  
filled with it). The mass of the liquid is

taken from the transformed density

formula. So, respectively: liquid mass =  
volume \* liquid density.
