In addition for use as an internal combustion engine, the basic Wankel design has also been used for gas compressors, and superchargers for internal combustion engines, but in these cases, although the design still offers advantages in reliability, the basic advantages of the Wankel in size and weight over the four-stroke internal combustion engine are irrelevant. In a design using a Wankel supercharger on a Wankel engine, the supercharger is twice the size of the engine.

Mazda has by far the most experience with the Wankel rotary configuration, but it’s not the only company interested in the technology. Ceramic Rotary Engines Inc. has developed a rotary engine design using advanced ceramics for the main components. The company says ceramics allow the engine to run hotter (and thus more efficiently), operate on a variety of fuels, and burn whatever fuel it is using more completely to reduce emissions.

New four-chamber rotary engine could supplant Wankel and piston engines for UAV applications. 2018-09-24 William Kucinski. The Szorenyi rotary engine prototype uses a hinged rhombus rotor instead of the three-sided rotor found in traditional Wankel rotary engines. Typically, Wankel engines are limited to a rotor speed of 3,000 revolutions per minute (rpm) because of the excessive crankshaft bending caused by the centrifugal forces of the eccentric rotor.

A Wankel engine is a special type of rotary engine that employs an eccentric motion mechanism to generate power for an automobile. The reciprocating internal combustion engine has been a ubiquitous source of rotational power for many decades now. However, it came with its own set of complications that made it quite unsatisfactory for one particular gentleman who found it wasteful to use reciprocating motion to generate rotational motion.

Rotary Engines. We have been working on Wankel rotary engines since 1996. Initially the approach was to make a 4-stroke karting engine that would be more powerful, more reliable and more fun than existing 2-stroke engines, which were about to be banned for emissions reasons. In the meantime our engines are used in a variety of applications beyond karting, for example in manned and unmanned airplanes and helicopters, boats, vehicles of all sorts as well as generators.
