September 8, 2014 By Jeffrey Gotro Leave a Comment. Isothermal curing can be investigated nicely using oscillatory parallel plate rheometry. It is suggested that disposable plates be used to facilitate sample removal from the rheometer at the conclusion of the curing run. When setting up the rheometer, the strain amplitude needs to be determined. In most cases, a strain amplitude in the range of 0.1-0.3% is adequate to get good torque response over the viscosity range of interest for thermosets.
