With the wall guided tumble design, the air bounces off the wall and meets the fuel at the tip of the spark plug. The fuel reaches the plug because the dish design of the piston forces the fuel upward as illustrated in figure 3d. The spray guided fuel design sprays fuel directly into the dish on top of the piston.

The spray-guided BMW DI combustion system eliminates the most important disadvantages of the wall-and air-guided 1<sup>st</sup> generation DI combustion systems. With its central injector position, the spray-guided system provides a stratified mixture at the spark plug and reduces wall wetting significantly. The low spray penetration and high spray stability of the outward-opening piezo injector allow an extension of the stratified engine map to higher engine load and speed.
