Solutes affect some properties of solutions that depend only on the concentration of the dissolved particles. These properties are called colligative properties A characteristic of solutions that depends only on the number of dissolved particles.. Four important colligative properties that we will examine here are vapor pressure depression, boiling point elevation, freezing point depression, and osmotic pressure.

In all solutions, whether gaseous, liquid, or solid, the substance present in the greatest amount is the solvent, and the substance or substances present in

lesser amounts are the solute (s). The solute does not have to be in the same physical state as the solvent, but the physical state of the solvent usually determines the state of the solution. As long as the solute and solvent combine to give a homogeneous solution, the solute is said to be soluble in the solvent.
