Adaptive antennas with array processing are a promising technology for enhanced interference mitigation and detection in GNSS receivers. Especially in the field of safety critical applications, interference is a major concern.

Field Test: Jamming the DLR Adaptive Antenna Receiver

An adaptive antenna for a handheld GPS receiver needs to possess a number of electrical and physical characteristics. The first electrical characteristic is three-dimensional interference suppression. To provide this, the antenna needs to have at least three elements. The second electrical characteristic is satellite signal reception.
