Class Notes - Mr. Anderson - Google Sites

$P(A)$ = number of outcomes in event A / total number of outcomes in the sample space. The probability of any event is a number between 0 and 1 (proportion). All possible outcomes MUST add up to 1. The probability that an event does not occur is 1 minus the probability that it does occur. In other words, this refers to the complement rule which says that $P(A^c) = 1 - P(A)$ where $P(A^c)$ is the complement of event A or the probability that event A doesn't occur.
